

ARTIST FOLLOWS HOBBY IN PRISON

German, Said to Be a Cousin of Kaiser, Paints Pictures

MURDERED HIS WIFE

Prisoner Silent About His Early Life in the Old Faderland

Special to The World.

MALESTER, July 15.—Behind the walls of the Oklahoma state prison here, buried the genius of a German artist.

While it might be said his genius was born to bluish unseem and waste its sweetness upon the prison walls, it is not exactly so for his paintings serve to embellish the walls of the prison halls and lobbies and visitors as well as inmates of the institution see and admire his work and thus his fame has penetrated the outside world.

Reported to be a cousin of the Kaiser and a millionaire in his own right, the convict artist has now served 25 years in a life sentence for murder of his wife.

Points of Evenings.

While his chief duties are in the kitchen and dining room of the prison he finds time during the long water evenings to wield his brush.

Many of his paintings adorn the walls and the scenery of the prison stage are his handiwork.

When asked if he was really a cousin of the Kaiser the old artist shook his head as if he denied the honor of kinship with Wilhelm but as to his wealth he admitted that besides an Oklahoma farm and city properties in Berlin where he was in the owner several lumber yards in Germany.

Somewhere back in "the father land" he has a child born to his sweetheart, he says, while he was serving his time in the German army.

He met the girl while stationed in Denmark and while the girl was also visiting in that country, after his release from the army, the artist says he tried to make amends to the girl and the child but that the latter was kidnapped by the government and the last he heard of it it had been adopted by a prominent Berlin physician.

Deities He Slew Spouse.

The artist came to America when he was 24 years old and married in New York state soon afterward. It was for the murder of his wife that he was convicted in Blaine county.

He was charged with having killed his wife and set fire to the evidence of his crime.

The convict claims that he was a victim of circumstances and that his wife was murdered by robbers who set fire to the house and that he himself remained the fire.

From New York the convict stated he went with his American wife to Scotland, Pa., where he was engaged in painting portraits of prominent officials in the district court of Crawford county, but he also knows how to run on aged and more or less disreputable brand.

Judge Bessley, who is the youngest justice in the state, is part owner of the "old home farm," where he was born and where he spent most of his life until he began his practice of law. The farm is near Girard.

The judge has operated the farm under every season since he became old enough. This year he left the bench and mounted the grand salmon, of which the district is placed at \$65,014.647.

Zell, represents the largest factor in the grand total.

Talbott trout comes second, with a distribution of \$1,578,454. Other important factors in trout distribution are shown in the report are: Cut-throats, 73,549,261; large lake, 1,215,649; eastern brook, 23,218,920; Lewis Lewis, 17,127,374; German brown, 3,888,934; steelhead, 45,442,631; total 1,287,650.

This total distribution of all fish by the commission, the report shows, was only 15,000 in 1921, as compared to 33,319,730 in 1921.

At the present time the state owns and operates 30 fish hatcheries and egg collecting stations.

Man Regains Health by Returning to Primitive

LOS ANGELES, Cal.—Frank Hansen has a new way of cheating death.

Told by physicians that he was rapidly approaching death, Hansen has regained his health by returning to the primitive life.

Hansen is said to have lived like a wild man on Santa Cruz island, off Santa Barbara, during the last 18 months, subsisting alone on mussels, abalones and fish. His only garment, it was said, was a bathing suit which suffered considerably through hard usage.

It is claimed by two ship capitalists that Hansen attracted considerable attention because he made friends with wild foxes and bears found on the island.

During 1921 Russian railroad interests purchased railway material to the value of 240,000,000 crowns from Sweden, 248,000,000 crowns from and 28,500,000 from England and other countries.

Newest Oil Town in Creek County Named for Harding

Special to The World.

BRISTOW, July 15.—Creek county has a new town in the offing.

And in compliment to the president of the United States, this latest addition to the list of Oklahoma oil cities is to be named Hardingtown. It will be located on the Ozark trail, four miles southwest of Bristolow on the beautiful rolling country of the poor farm oil pool, in sections 2 and 32-15-8.

A tract of land consisting of 80 acres has been set aside for a townsite in the heart of the poor farm

George A. Dye, vice president of Wilcox Oil & Gas Co. and Albert Kelley, oil producer of Bristolow.

pool. The land is divided into four lots, a tract lying on either side of the Ozark highway. One portion will be given over to business houses and industrial sites and the other reserved for residential purposes.

Ever since the Roland gusher came in a few years ago, Albert Kelley, who owns over one thousand acres in the poor farm district, has been interested in prospecting for persons desiring to secure permits to build business or dwelling houses

on his land. In desperation he decided to found a town. Since his property is located in the Chiles-Huey Investment company of Oklahoma City has had active charge of the work. Today finds Hardingtown's prospects for becoming a city very bright.

F. L. Chiles has been in Bristolow for the last fortnight attending to the surveying on the townsite and getting everything in readiness for the sale of lots.

A contest is on for the best slogan for Hardingtown. The person furnishing the best slogan for the new city will be awarded a residence lot. Any person, regardless of age, will be allowed to enter this contest.

The only provision is that the text of the slogan will be confined to two words. Prominent oil men of the poor farm district will be the judges in this contest.

The real reason for Hardingtown began in 1920 when oil was discovered in the Wilcox Oil & Gas Co. and Albert Kelley brought in their poor farm well in section 35. This was the discovery well of the field south of Bristolow and came in in 1920. The well was drilled by the rich oil painted the rig black, Kelley, popular bachelor-rancher and business man, realized the greatest day of his life.

DRIVE IS BEGUN FOR TOWNER BILL

Bitter Attacks Against Measure Arouse Its Many Backers

WASHINGTON—So bitter has become the criticism of the Sheppard-Towner maternity law throughout the country that friends of the measure have begun a propaganda in its favor, hoping to forestall a movement to repeal it.

Massachusetts has declined to make an appropriation to match the federal aid provided to the states by the bill. In many quarters the bill has been attacked as the worst in parliament.

Whatever be the merits or demerits of the Towner-Sheppard law neither party from its glass hour can throw stones at the other. It was introduced in the house by Congressman Towner, republican, Iowa, and in the senate by Senator Morris Sheppard, democrat, of Texas.

Attacked by the attacks of the bill Mrs. Maudie P. Carpenter, executive secretary of the National League of Women Voters, has issued a statement defending it. Mrs. Cunningham said:

"The Sheppard-Towner bill is the greatest piece of legislation that has been passed in the history of our country. It is a bill that should be called in when other matters are to be considered. On the one hand it is a bill that is a boon to the mothers and babies just as they are called in when other matters are to be considered. On the other hand it is a bill that is a boon to the mothers and babies just as they are called in when other matters are to be considered.

Following the strike of the Harding well the poor farm pool was an exception during the throes of the national business depression. Very little development work was done until this spring, but since the Harding well was discovered, the poor farm district has become the greatest petroleum and gas find in the world. Day and night the road between there and Bristolow thronged with wagons and trucks.

Over 25 wells are producing. Dozens of new wells are being drilled, there are two pumping stations in the field. The well is being installed a three-inch casing and a gas plant. The Sheppard-Towner act provisions has been brought to her physician many a woman who two years ago would have been certified as insane and old-age advice.

No one supposes that the new plan is to take over the work of either the physician or the county nurse. The very same sum set aside for each county means that education in the real need for prenatal care will begin to be national wide, not confined to cities, that the boards of health will give the benefit of expert advice in ways and means of lessening unnecessary and preventable death.

"It is the province of the federal government to stimulate state health work and to coordinate with official state organizations. The coming of yellow fever and influenza prove what that co-operation means. The Sheppard-Towner act provides for the health of children and the state which does not accept its provisions will have difficulty in explaining its attitude in the eyes of the people.

There is no cry that the department of agriculture dictates to any farmer how he shall farm his land. It merely puts a price on the land and the Sheppard-Towner plan does precisely the same thing for the health departments which are everywhere waiting to be put into operation.

"It is well to help the farmer. The whole country admits it. In the heart of the farmer's wife who sees the added health of stock, the increased yield of crops and the betterment of agriculture, there is a selfish hope that the helping hand will be extended to her, too. A health center some of the best of the country, even an small village, within reach of even an small beginning of a health center as the Sheppard-Towner act provides.

The advice of a person who knows, the certainty of the good that will be done, the fact that it is a thing the government recommends, not a foolish notion born of lonely fears and lack of self-control—these are the reasons why the woman who needs and endures, hopes with heart and soul for state will accept the Sheppard-Towner plan."

Man Who Neglects to Exercise Right of Suffrage Is Shirked and Deserves to Be Fined.

France regards the repeating voter as of less dangerous effect than the voter who won't vote at all. A bill has been proposed to post the name of the voter who neglects to exercise the vote evader on his first offense, fine him on his second offense, fine and suspend him on his third offense and disfranchise him on his fourth. It is not clear whether this legislation will actually bring about more general participation in the elections by the people, or whether it will bring about a more general participation in the elections by the people, or whether it will bring about a more general participation in the elections by the people.

Watermelon Production.

WASHINGTON—The condition of the commercial crop of watermelons on June 15 was 33 per cent, the department of agriculture has announced.

This was identical with the May 1 condition, and five points above the seven-year average.

Wife Breaks Up Husband's Affair With Other Woman; Shoots Him and the Girl

Special to The World.

WYNNE, Ark., July 15.—Mrs. E. Sisk of Wynne, is evidently a handy little hand with a pistol.

She shot and perhaps fatally wounded her husband and shot and slightly wounded Mrs. Gus Rose, it is said.

And she is still at liberty. In fact, there is no doubt expressed whether she will be arrested even if her husband dies.

According to the story of officers Mrs. Sisk was perfectly justified. Her husband, who is a barber, is said to have gone to his home with Mrs. Rose and Mrs. Rose. They were all drinking and attempted to force an entrance into the home of Mrs. Sisk. She refused to admit them and when they persisted opened fire on the party. Rose and the woman immediately left.

Next morning, it is said Sisk procured his wife to go to Parkin, the home of the Roses, and break off relations with them. To make sure he did Mrs. Sisk accompanied him, over his strenuous objection, into the back seat of an automobile

and pointed a gun at her husband and forced him to drive to Parkin. Arriving there, they entered the Rose home and Sisk explained that she had been fired at by Rose. He shot her wife and while he held her Mrs. Rose administered a severe beating.

Then Mrs. Sisk managed to draw her pistol. It is said, she fired three times. One shot struck her husband in the throat. A second shot passed through the ear of Mrs. Rose, who was trying to tear out a screen and escape through a window, missed him.

Sisk was taken to a hospital and his condition is critical.

Mrs. Sisk several years ago demonstrated considerable ability with firearms. She went to a residence in Wynne, where she was engaged in a poker game and demanded admittance. When this was refused she fired through the door presumably at her husband. She missed Sisk but wounded another man.

Blind Bachelor Makes Instruments

FAIRMONT, W. Va.—Although blind for more than 38 years, Thomas Doolittle has made in that time more than two hundred musical instruments ranging from violins to a creation of his own which he has named the "violin-mandolin."

Doolittle lost his sight when but 19 years of age through a scrofulous affection. Dependent as a consequence of the loss of his sight, he tried to forget his misfortune through absorption in his violin, an instrument which he already played well.

In course of time Thomas became an expert violinist, and in order to capitalize his ability he decided to tour the rural districts giving one and two-night concerts in country schoolhouses and churches.

This idea proved very popular in the rural communities, where good music was not heard often. Doolittle continued these concerts for many years in this time he played in nearly every county in the state of West Virginia, following a regular circuit. In giving these concerts he acquired a reputation as a musician that has withstood the years.

Doolittle was Carpenter.

Prior to the loss of his sight Doolittle had been a carpenter and he still kept trying to "make things" with soft wood and a penknife. He found this interesting, and it was not long until he attempted work that required other tools.

As Doolittle became more and more interested in this work he again saw possibilities ahead and decided to try really different work. He first attempted to make a violin, but this was not successful. He then tried to make a mandolin, but this was not successful either. He then tried to make a guitar, but this was not successful either. He then tried to make a piano, but this was not successful either. He then tried to make a harmonium, but this was not successful either. He then tried to make a reed organ, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either. He then tried to make a wind instrument, but this was not successful either. He then tried to make a brass instrument, but this was not successful either. He then tried to make a percussion instrument, but this was not successful either. He then tried to make a stringed instrument, but this was not successful either.
